

Low voltage power supplies double stabilized

Series NTN from 6,5 V to 350 V / 35 W to 100 kW

Design Example

NTN 700 - 125
125V / 5A

Features:

- Simple construction
- Short circuit proof and unlimited operation with full current in short circuit condition
- Voltage and current regulation with automatic and sharp transition; control modes indicated by LEDs
- Voltage and current setting via 10-turn potentiometers with precision scale; the adjusting knob can be locked
- 4½ digit DVM for voltage and current (for table-top models)
- Sense terminals for the compensation of voltage drop on the load lines. The nominal voltage always refers to the output terminals
- Parallel and series connection possible
- Suitable also for inductive and capacitive loads
- Safety interlock loop and internal interlock is standard on three-phase units
- Elapsed-hour meter as a standard on three-phase units

Function:

The mains voltage is transformed to the appropriate level. On the secondary side of the transformer is a thyristor controlled rectifier stage (phase cutting circuit), the output of which is used to charge a capacitor bank. This capacitor bank is also connected to the final series regulating transistor output stage. By controlling the conduction angle of the thyristors after each zero-crossing of the sinusoidal voltage, the flow of energy is regulated in such a way as to have a defined voltage drop across the final series transistor stage (pre-regulation). The performance of the final series transistor stage defines the final stability of the output voltage (main regulation).

Design:

- Up to 140W nominal power ½19" table-top case
- For 350W nominal power or higher 19" table-top case
- 19" Rack-adapters for mounting into a 19" rack are available as accessory
- For 7kW nominal power or higher 19" cabinet. Height depending on type. The side covers are detachable and the rear door is lockable.
- All cabinets are equipped with fork-lift-compatible plinths and removable crane-eyes.
- Single cabinets up to 38U are easily transportable by fork-lift.

- Cooling is carried out via convection or built-in fans, with the air being exhausted (depending upon type) either via the rear or the top. For high power units water cooling can also be used.

Output:

- Output isolation:
The output is floating, maximum operating voltage with respect to earth: ±500V. Either the positive or the negative terminal may be connected to earth. For units equipped with the analog programming: the "0V" of the analog programming is connected to the positive output.
- Output terminals:
Up to 20A output current, 4mm safety connectors are used on the rear side. For currents up to 300A - clamps are fitted whilst for higher currents we use copper bars.

Technical Data:

- Mains connection:
Up to 1400W nominal power: 230V ±10% 47Hz to 53Hz
For 2800W and higher: 400V ±10% 47Hz to 53Hz; two-phase
For 7000W and higher: 400V ±10% 47Hz to 53Hz; three-phase
- Ambient temperature: 0°C to +40°C

The following data applies for voltage and current regulation, and refers to the rated value (unless otherwise stated): (For explanations please refer to Definitions and Terms on page 54.)

- Setting range:
from approx. 0,1% to 100%
- Setting resolution:
±1 x 10⁻⁴
- Residual ripple (0 - 10MHz):
<1 x 10⁻⁴pp + 10mVpp

- Recovery time:
Voltage control:
<50µs for load changes from 10% to 100% or from 100% to 10%.

Current control:
<500ms for load changes causing an output change of less than 10% of the rated voltage.

Units with output voltage >65V, will switch off for a short time at high and fast load changes.

- Setting time at nominal load:
100ms to 500ms for changes of the output voltage from 10% to 90% or 90% to 10%
- Discharge time constant for output without load:
approx. 2sec. to 60sec., depending on type
- Deviation:
For ±10% mains voltage variation:
<± 1 x 10⁻⁵
For no load / full load:
<2 x 10⁻⁴
Over 8 hours under constant conditions:
<±1 x 10⁻⁴
Within the temperature range:
<±1 x 10⁻⁴/K

Possible Options:

- Coarse/fine-potentiometers (99% / 1%) for more accurate adjustment of voltage and / or current
- Analog programming (The positive output has to be earthed; see also page 44)
- Analog programming, floating (see page 44)
- Computer interfaces - IEEE 488, RS 232, RS 422, Profibus DP, USB, LAN (more on request) (see page 46)
- Roller blades for cabinet units
- Higher stability (see page 48)
- Power limitation (see page 48)

More options and special solutions on request. Some options may involve changes to the description of the unit - especially concerning the mechanical design.

Low voltage power supplies double stabilized Series NTN from 6,5 V to 350 V / 35 W to 100 kW
